

**MODEL
7360RATCWL (E)**

PARTS & INSTRUCTION MANUAL

CONTENTS

Instruction manual.....	1-13
Parts catalogue.....	19-34
 Arm and bed mechanism.....	19-20
 Arm shaft, vertical shaft and thread take-up mechanism.....	21-22
 Feeding, feed lifting and rotating hook mechanism.....	23-24
 Stitch length regulating mechanism.....	25-26
 Presser foot mechanism.....	27-28
 Knife actuating mechanism.....	29-30
 Reverse sewing and detector mechanism.....	31
 Wiper mechanism.....	32
 Oil pump mechanism.....	33
 Oil reservoir and accessories.....	34

Before putting a new machine into operation, remove the plugs (A) on the top of the arm and replenish the oil supply. Lift the presser foot and run the machine at a low speed of 2000 spm to check that the oil is being distributed correctly by inspecting the window on the oil reservoir. When lubrication is normal, keep the machine running at this speed for 30 minutes, and then increase the running speed gradually. After a month of running, the machine can be run at maximum speed assuming normal working conditions.

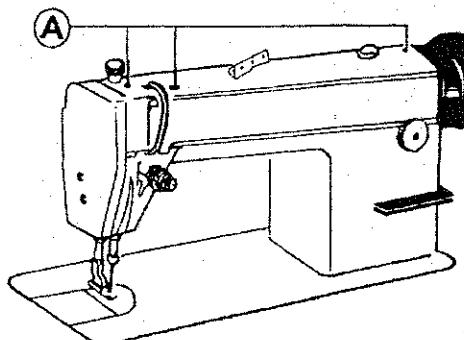

Fig. 1

FILLING THE OIL RESERVOIR

The amount of oil in the reservoir is controlled through the reference marks A and B shown in Fig 2. A indicates the maximum oil level, the mark B is the minimum oil level. If the oil level is below the mark B refill the oil reservoir.

When filling the reservoir, loosen the oil draining screw (c), drain off the remaining oil reservoir completely, clean the reservoir and re-tighten the oil draining screw (c) and fill the oil reservoir with fresh sewing machine oil.

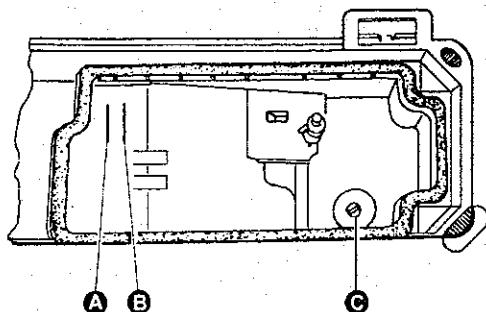

Fig. 2

REGULATING OIL DISTRIBUTION ON THE ROTATING HOOK

Adjust the amount of oil used to lubricate the rotating hook by turning the oil flow adjusting screw (A). Turn the screw (A) clockwise (in the direction of the + sign) to increase the oil flow; turn it counter-clockwise (in the direction of the - sign) to decrease the oil flow.

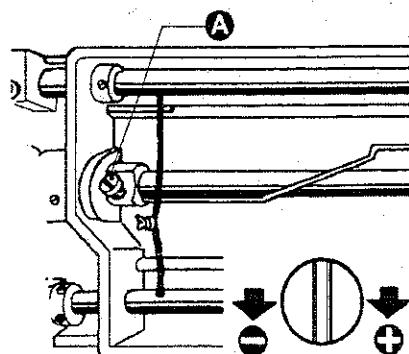

Fig. 3

OIL PUMP ADJUSTMENT

During everyday operation, adjusting the oil pump is not usually necessary. If the oil level doesn't fluctuate in the oil reservoir window when the machine runs at a low speed, close the clearance on the oil bypass hole.

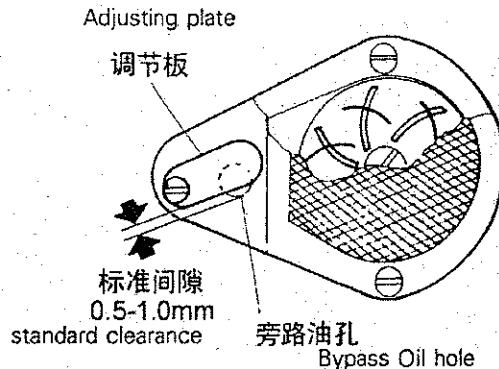

Fig. 4

NEEDLE INSTALLATION

Turn the balance wheel to lift the needle bar to the upper end of its stroke. Loosen the needle clamp screw while keeping the long groove of the needle facing left; insert the needle shank up to the bottom of the needle socket, then tighten the needle clamp screw.

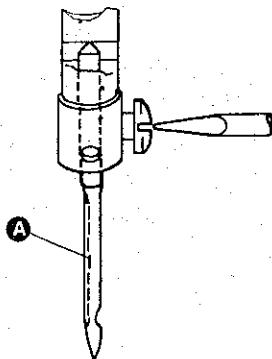

Fig. 5

CONNECTING THE CLUTCH LEVER TO THE PEDAL

The optimum tilt angle of the pedal is approximately 15 degrees.

Adjust the clutch so that the clutch lever (c) aligns with the draw bar (B) as shown

in Fig. 6. The machine pulley should rotate counter clockwise when viewed from the outside of it. The rotating direction of motor pulley can be reversed by turning the plug of the motor 180 degrees.

Adjust the tension of 0-Belt (F) by moving the motor up and down; the proper tension on the 0-belt is a slack of 10-20 mm when the belt is depressed at the center of the belt.

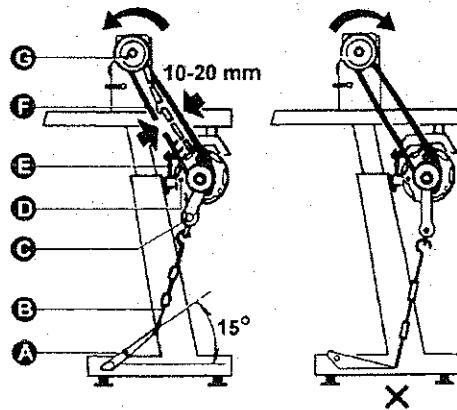

Fig. 6

BELT COVER INSTALLATION

Install the belt cover for the sake of safety. Install belt cover (C) to arm with screw (A) and screw (B), and install belt cover (E) onto table with screw (D).

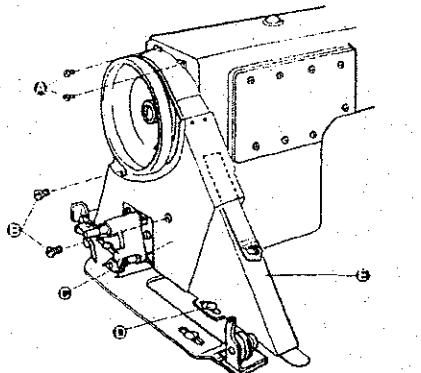

Fig. 7

ADJUSTING THE TIMING OF THE TENSION DISCS

Within the presser foot lift range, the timing of the tension discs can be adjusted as follows:

Remove the rubber plug from the back of the arm and loosen the screw (A) of the knee lift lever (left).

Move the tension releasing cam (D) to the left for earlier opening or to the right for later opening.

It will facilitate the adjustment if a block is put under the presser foot lift.

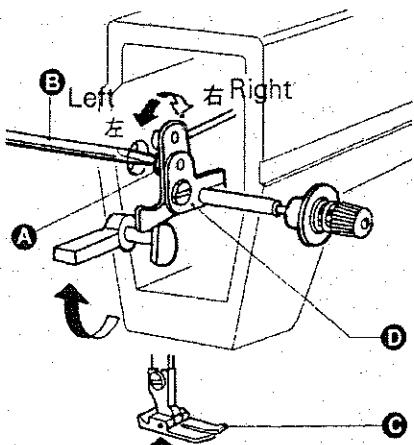

Fig. 8

THREADING

To thread the needle, raise the needle bar to the upper end of its stroke. Lead the thread from the spool and follow the progression as shown in Fig. 9. To draw the bobbin thread, hold the end of the needle thread and turn the balance wheel to lower the needle bar and then lift it to its highest position. Pull the ends of needle thread and bobbin thread toward the front and under the presser foot.

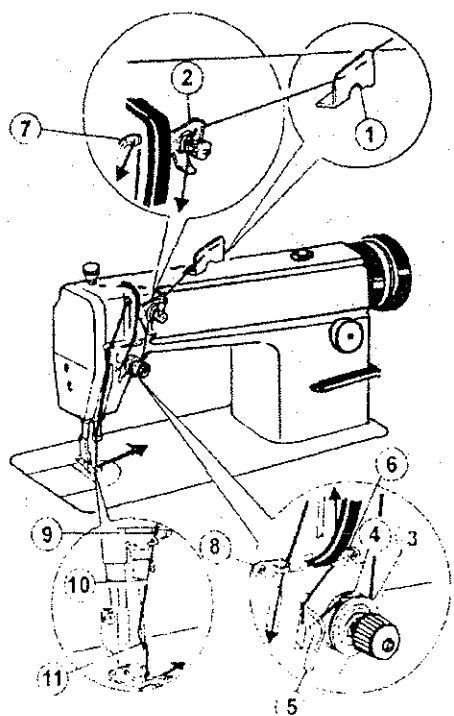

Fig. 9

BOBBIN WINDER INSTALLATION AND ADJUSTMENT

The bobbin winder pulley should align with the V belt and there should be some clearance between them. When the bobbin winder stop latch lever is depressed, the V belt should be in contact with the bobbin winder pulley so that the bobbin winder pulley can be driven by the V belt. The thread on the bobbin should be uniform and tight. If not, turn the tension stud nut (A) on the bobbin winder tension bracket to adjust the tension. First, loosen the set screw (B) on the bobbin winder tension bracket and move the bracket (C) either left or right as needed. For instance, if the thread is wound as illustrated by figure (b), move the bracket left. If it is wound as in figure (c) move it right. After adjusting the tension make sure to tighten set screw (B). Don not overfill the bobbin, figure (d). For best results, fill to about 80% capacity. This can be adjusted by using screw (E).

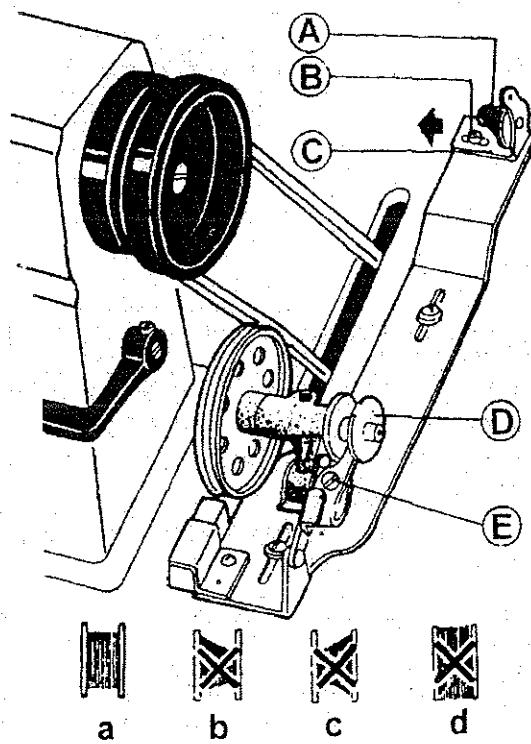

Fig. 10

ADJUSTING THE PRESSURE ON THE PRESSER FOOT

Adjusting the pressure on the presser foot is dependent upon the thickness of the material being sewn. First, loosen lock nut (A). For heavy materials turn the pressure regulating thumb screw in the direction indicated in Fig. 11 (a) to increase the pressure. For light materials turn the thumb screw in the opposite direction as shown in Fig. 11 (b) to decrease the pressure. Once the appropriate pressure has been set tighten lock nut (A).

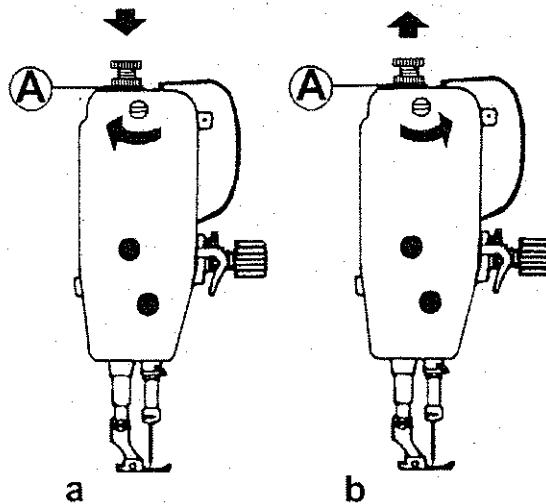

Fig. 11

THREAD TENSION ADJUSTMENT

Thread tension should be determined in tandem with the stitch obtained by adjusting the tension on the bobbin thread and the needle tension Fig. 12. The tension of the bobbin thread should be adjusted by turning the tension spring regulating screw on the bobbin case. Once it is adjusted, insert the bobbin into the bobbin case and hold the end of the thread from the case and let it hang. If the bobbin rotates slowly downward the tension is correct. The tension on the needle thread is adjusted by turning the thumb nut.

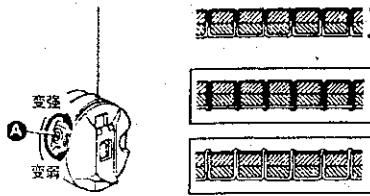

Fig. 12

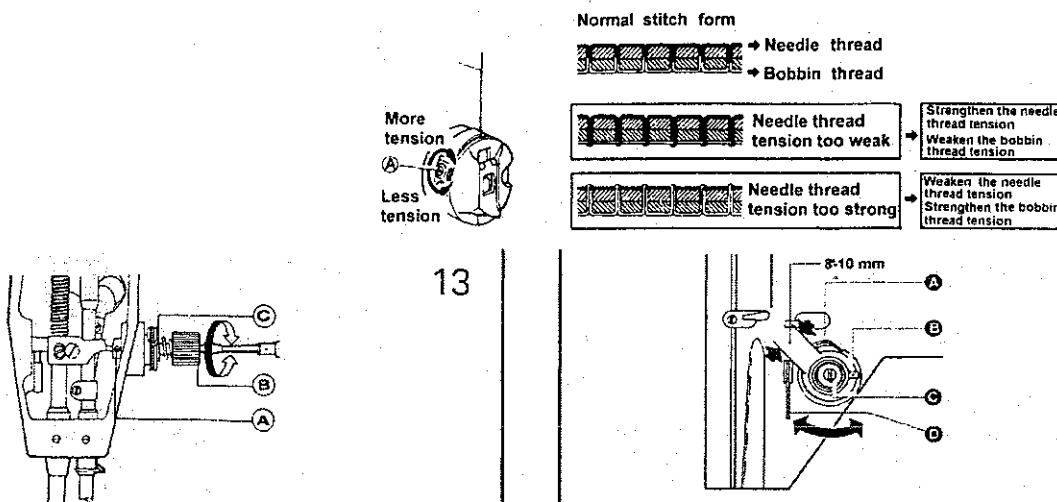

Fig. 13

Fig. 14

The stroke of the thread take-up spring runs from 8mm to 10mm. When sewing very thin fabrics, reduce the thread take-up spring tension and increase the thread take-up spring stroke. Conversely increase the thread take-up spring tension and reduce the thread take-up stroke when sewing very thick fabrics.

To adjust the thread take-up spring tension: (Fig. 13), first loosen the set screw (A) then turn the tension stud (B) counter clockwise to decrease the tension of the thread take-up spring (C) to zero. then turn the tension stud (B) clockwise till the spring (C) comes to the notch of the tension regulating bushing, and again turn the tension stud (B) halfway back (counter clockwise), After the adjustment, tighten the set screw (A).

Adjusting the thread take-up spring stroke: (Fig. 14) loosen the set screw (B) turn the stud (C) clockwise to increase the stroke or turn stud (C) counter clockwise to decrease the stroke. After making the adjustment, tighten set screw (B).

SYNCHRONIZATION OF THE NEEDLE WITH THE ROTATING HOOK

When the needle bar is raised from its lowest position the gap should equal that illustrated by (A) in Fig. 15. The hook point (D, Fig. 16) of the bobbin should align with the center line of the needle and be 1- 1.5 mm above upper end of the needle eye (Fig 15).

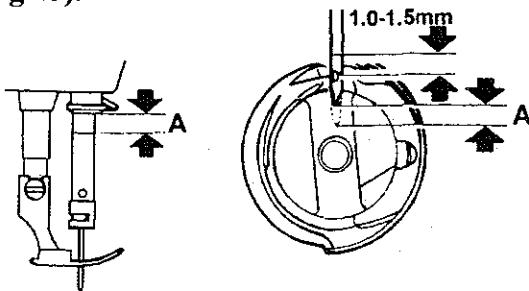

Fig. 15

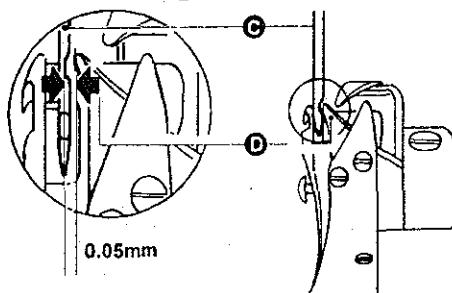

Fig. 16

The clearance between the bottom of the needle notch and the hook point should be approximately 0.05 mm (Fig. 16).

ADJUSTING STITCH LENGTH AND REVERSE FEEDING

The stitch length can be adjusted by turning dial (A). The figures on the face (B) of the dial show the stitch length in mm. The reverse feed lever must be depressed while adjusting the stitch length. Reverse feeding starts when the reverse feed lever (c) is depressed, the machine will feed forward again when the reverse feed lever is released.

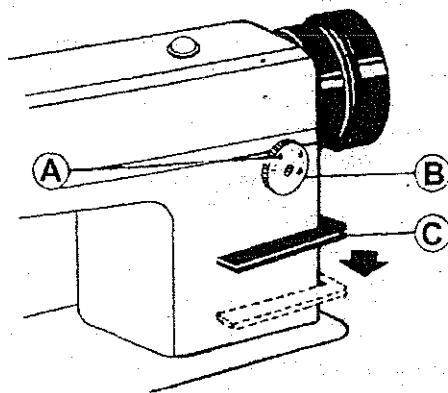

Fig. 17

ADJUSTING THE POSITION OF THE FEED DOG AND NEEDLE

Turn the balance wheel to lower the Feed Dog (A). When the top of the feed dog is flush with the Throat Plate Surface (B), the Needle Point (C) should be 3mm below the surface of the throat plate. The adjustment should be made by adjusting the position of the feed cam and feed lift cam (Fig. 19).

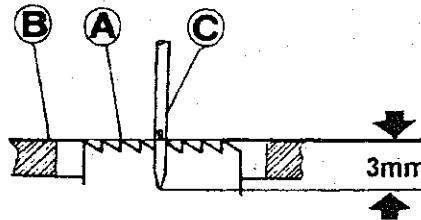

Fig. 18

Standard position is shown in Fig. 19. For the third screw (A) of feed cam and the second screw (B) of feed lift cam to Arm Shaft Oil Hole (C) is set to the direction of the balance wheel turning.

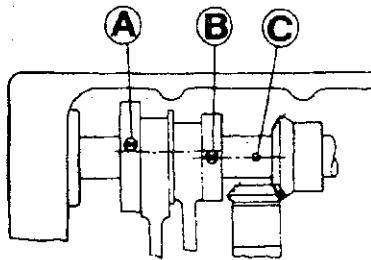

Fig. 19

STITCH LENGTH ADJUSTMENT

Loosen Screw (A) to adjust Stitch Length Adjusting Cam (B). Turn it to the right to narrow the stitch length for forward stitches, and widen it for reverse; turn it left to widen the stitch length for forward stitches, and narrow it for reverse.

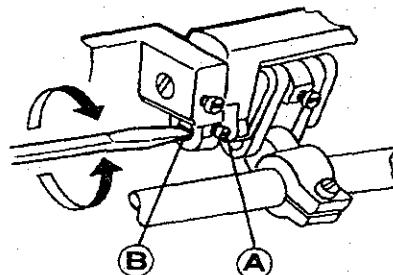

Fig. 20

FEED DOG HORIZONTAL ADJUSTMENT

Lift the front of the feed dog to prevent the fabric from puckering. Lower the front of the feed dog to prevent the fabric from tearing or the bobbin thread breaking.

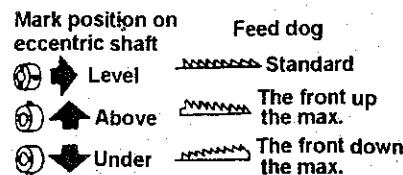

Fig. 21

THREAD CUTTING MECHANISM

The thread cutting mechanism adapts the hook shaft cam driving for thread cutting. If thread cutting electromagnet works, and after it finishes trimming the thread, reset thread cutting cam crank at once, otherwise this may cause the movable knife and needle to collide and damage them.

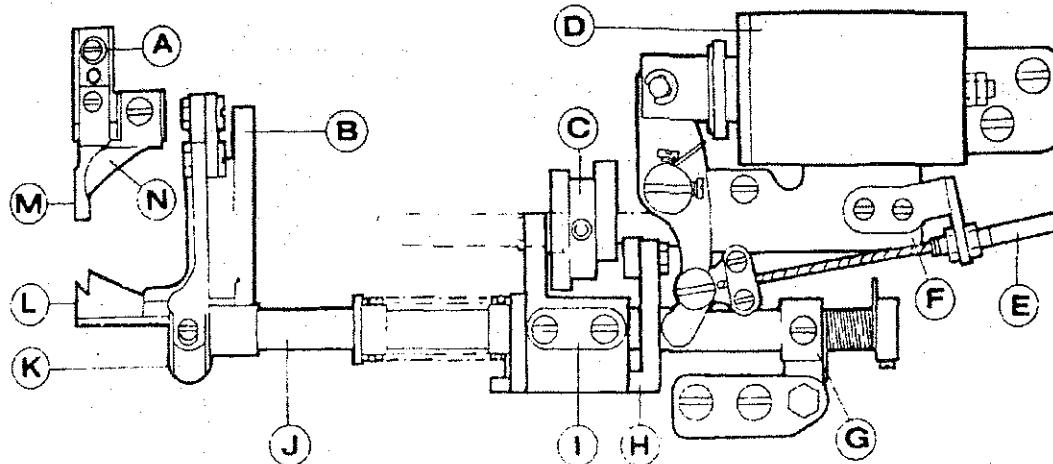

Fig. 22

KEY FOR Fig. 22

- | | |
|------------------------------|-----------------------------------|
| A - fixed knife support asm. | B - knife support asm. (left) |
| C - thread cutting cam. | D - thread cutting electromagnet. |
| E - soft thread. | F - electromagnet asm. |
| G - stopper. | H, I - thread cutting cam crank. |
| J - cutter driving shaft. | K - cutter driving crank. |
| L - knife(left). | M - fixed knife. |
| N - thread retainer. | |

KNIFE SUPPORT ASM (left)

Insert the left knife support assembly (B) into Hook Shaft Bushing (C) as the figure shows and then tighten screw (A).

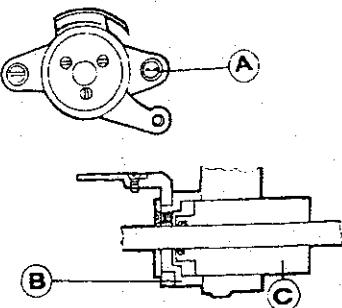

Fig. 23

FIXED KNIFE SUPPORT ASSEMBLY

Remove the hook positioner and then set it with screw (A) shown in Fig 24 (B)-fixed knife support assembly.

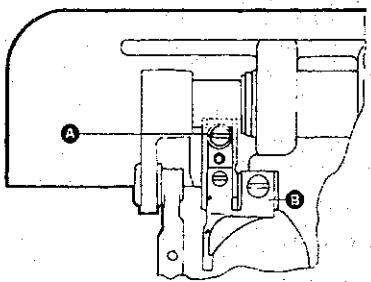

Fig. 24

POSITION OF THE FIXED KNIFE AND LEFT KNIFE POINT

(1) The standard position is shown in figure 24. If the size is larger than the standard, the knife will either cut the 3 threads or draw the thread out of the needle eye; if smaller, it will cause damage, so be sure to avoid that. If any of the above mentioned situations occur, adjust by setting the fixed knife support or the fixed knife (B).

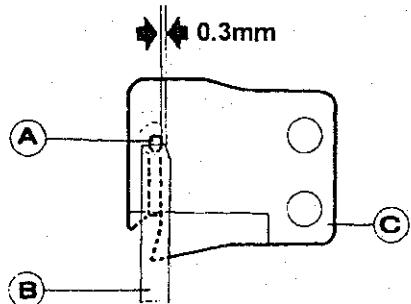

Fig. 25
A-the blade C-the knife (left)

CONNECTING THE KNIFE SUPPORT AND CUTTER DRIVING CRANK

Connect them as figure 26 shows and notice the position of Cutter Link Lever (A).

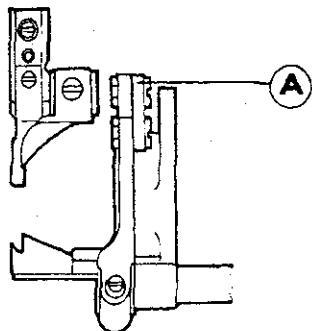

Fig. 26

POSITIONING THE CUTTER DRIVING SHAFT

The Standard position is shown in figure 27. When assembled, the Cutter Driving Shaft (G) should first be put in Cutter Driving Crank (A). Set Thread Cutting Cam Crank 1 (D) on the cutter driving shaft by referring to the standard position. Set Stopper (F), make sure that there is no clearance between parts around the cutter driving shaft, and rotate evenly.

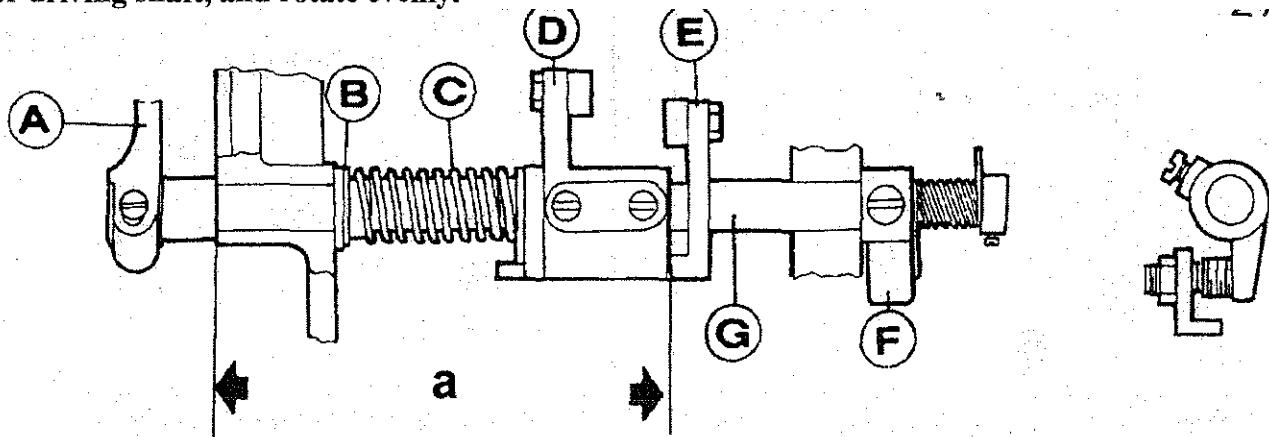

Fig. 27 B-spring end cover C-spring E-thread cutting cam crank 2

THE ELECTROMAGNET CORE STROKE

The standard stroke of the electromagnet core is 6mm. The stroke can be adjusted with Positioning screw (A).

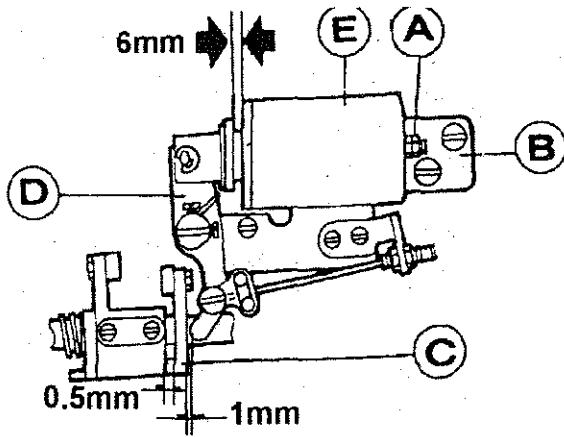

Fig. 28

B-thread cutting electromagnet holder

C-thread cutting cam crank 2

D-driving bar

E-thread cutting electromagnet

The installation parameters are shown in Fig. 28.

INSTALLING THE THREAD CUTTING CAM

Align balance wheel machine arm No. 2 Positioning Mark (A) with Positioning Mark (B) on the machine arm as shown in Fig. 29.

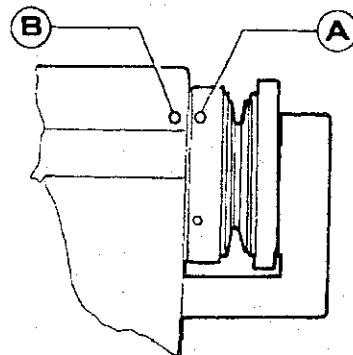

Fig. 29

As the thread cutting electromagnet runs, the Thread Cutting Cam (A) rotates in the normal direction. Fix the cam when Cam (A) is engaged with Roller (B).

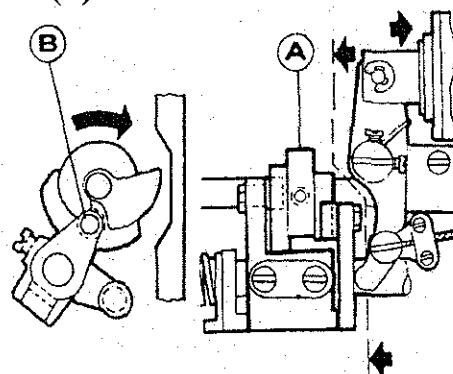

Fig. 30

To stop operating the electromagnet, reset Cam Driving Crank (A), Cam (B) is separated from engaging with the roller, the standard clearance is 0.5-1 mm.

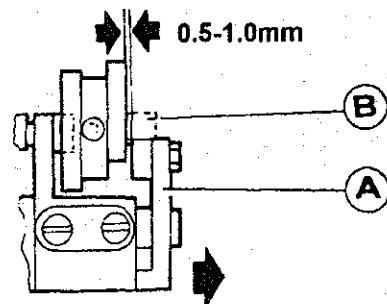

Fig. 31

Note: figure 32 shows the standard position of Cam Driving Crank (D) before operation.

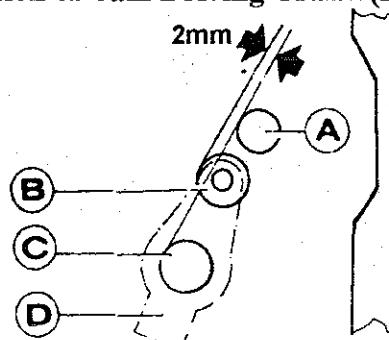

Fig. 32

Key: A-hook shaft B-roller C-cutter driving shaft

It may change the positions mentioned above to remove the stopper, then adjust with Screw (A), and readjust following the progression from Fig. 29-31.

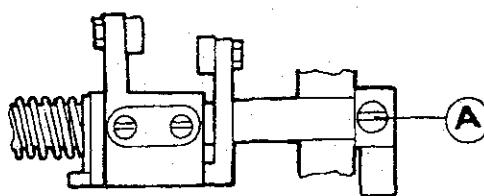

Fig. 33

ADJUSTING KNIFE CUTTING DEPTH

Figure 34 shows the standard positions of left knife and the fixed knife.

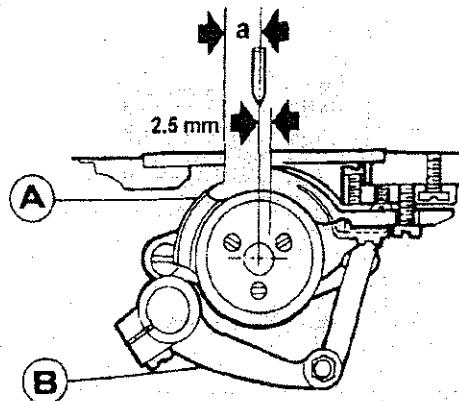

Fig. 34

Key: A-knife (right) B-cutter driving shaft

Adjusting the knife cutting depth: When the electromagnet is working, run the machine, the left knife (A) will follow the motion of the thread cutting cam. The maximum degree of cutting depth is 1.5-2.0mm (B) for the fixed knife. Adjust the cutter driving crank if necessary.

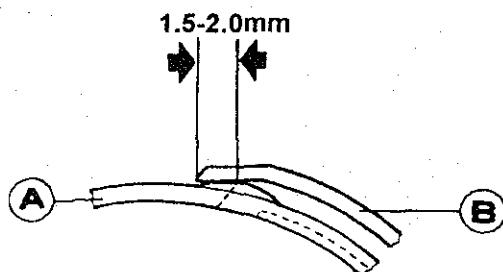

Fig. 35

ADJUSTING THE CUTTING PRESSURE

Figure 36 shows the standard position that the Left Knife (A) begins to touch the Fixed Knife (B).

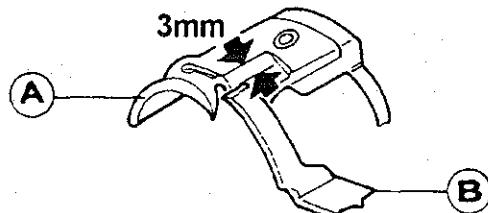

Fig. 36

(2) When cutting heavier thread, increase the cutting pressure. To adjust the cutting pressure, loosen Set Nut (A), and adjust Screw (B).

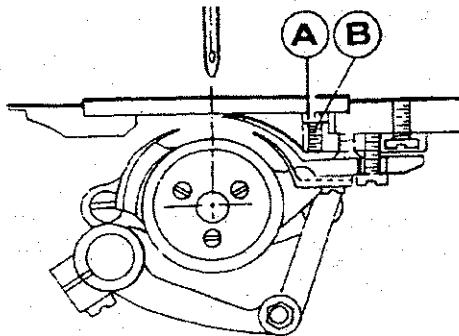

Fig. 37

ADJUSTING THE NEEDLE THREAD TENSION

There should be a clearance of 1 mm between the two discs while the thread cutting electromagnet (A) is working. To make an adjustment, loosen Nut (B) and move soft thread (C).

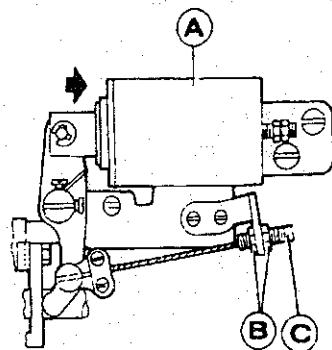

Fig. 38

Note: If the clearance is too narrow, the thread end left after cutting is too short and may be pulled away from the needle eye; otherwise the tension will be slack and will effect the needle thread tension.

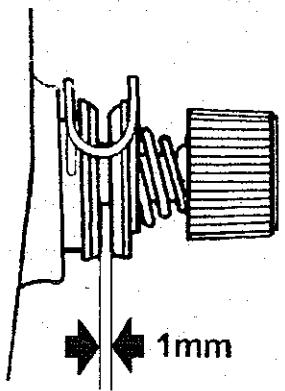

Fig. 39

THREAD ENDS ADJUSTMENT

To get the needle thread ends to the proper length, adjust Nut (A). Turn right to shorten. Turn left to lengthen.

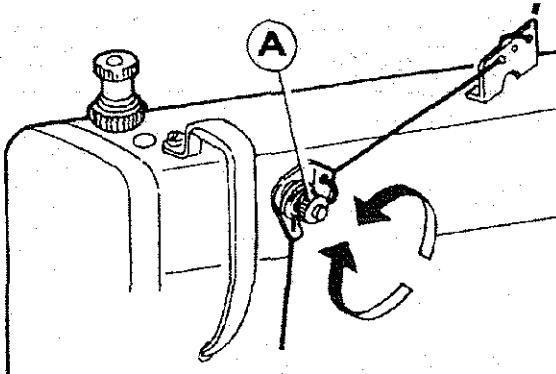

Fig. 40

INSTALLING REVERSE STITCH ELECTROMAGNET

Adjust the position of Electromagnet (A) properly to guarantee the flexible connection of the magnet to the link lever and the convenient operation of Reverse Stitch Bar (B), then set with a screw.

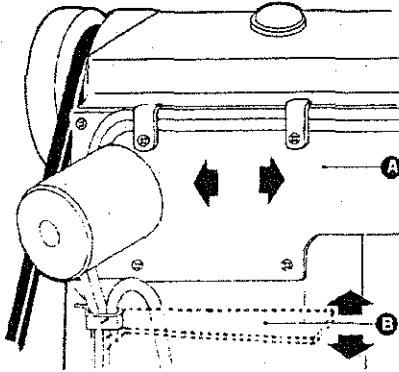

Fig. 41

REVERSE SWITCH

The figure shows the normal position. To reverse stitch, simply slide the switch as indicated in Fig. 42. To resume normal sewing, slide the switch back to the original position.

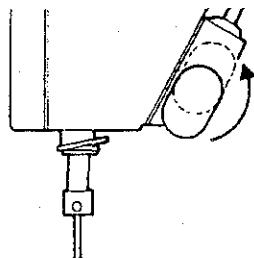

Fig. 42

THREAD RETAINING DEVICE

Thread Retainer Height

The standard height is 2 mm from the needle point when the needle is at its highest position.

To adjust Thread Retainer (B), loosen screw (A).

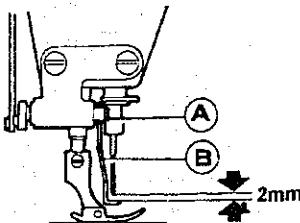

Fig. 43

When the magnet is electromagnetically engaged, the standard distance between the thread retainer and the center of the needle should be 0-2 mm.

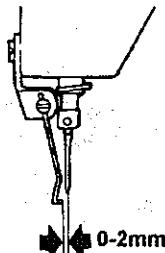

Fig. 44

To adjust its position, loosen Screw (C) and Screw (B) and then adjust the position of Electromagnet Assembly (A).

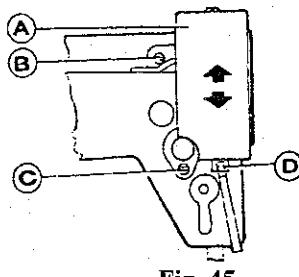

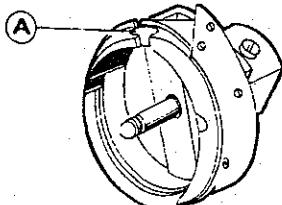

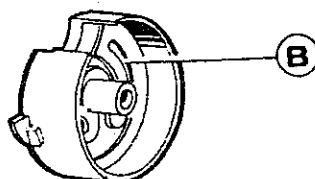

Fig. 45

HOOK BOBBIN CASE AND BOBBIN

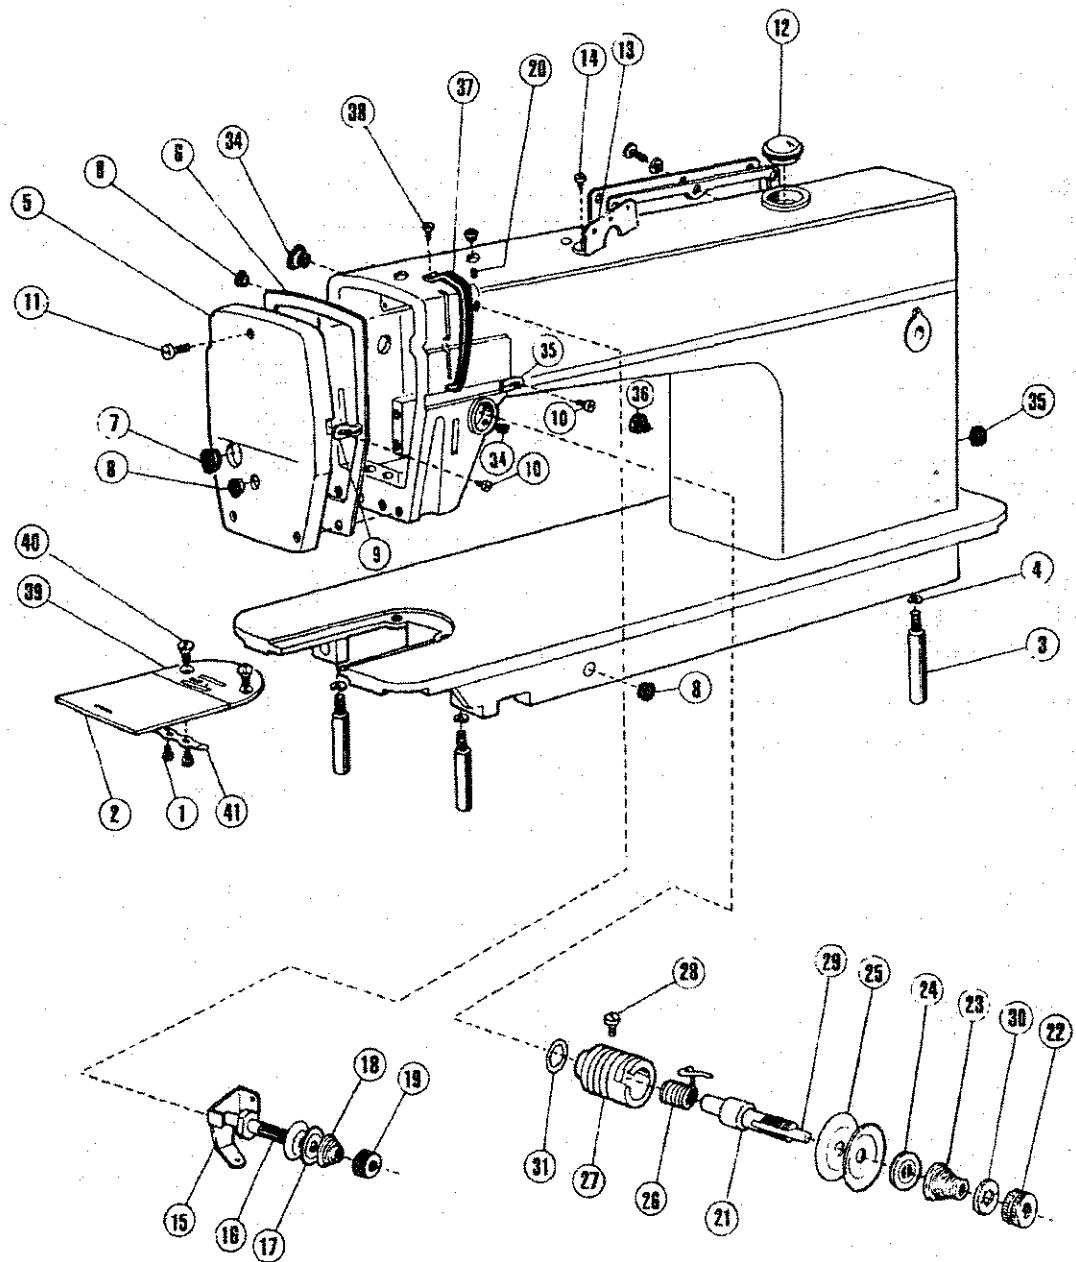

There is a thread groove (A) in the special hook for thread cutting sewing machine.

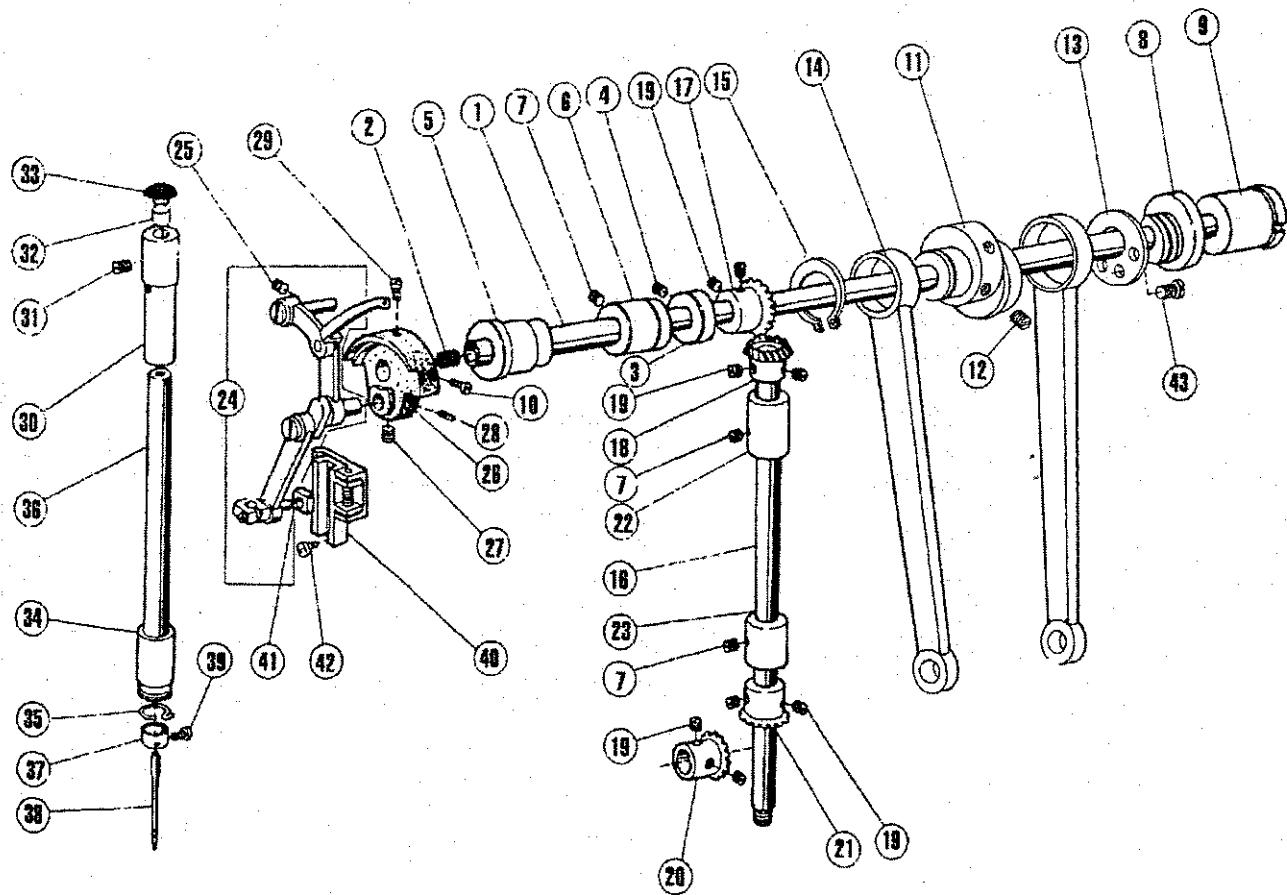

2. The bobbin case used in the machine should be equipped with a spring (B) in the bottom, which prevents the bobbin from running when it is empty.

PRESSER FOOT MECHANISM

No. Part No.

Description

1	57T7 - 001A1	压脚扳手	Presser bar lifter
2	J0.0.35	压脚扳手螺钉	Screw
3	36T6 - 002B1	压紧杆提升凸轮	Presser bar lifting cam
4	GB1235 - 76	压紧杆提升凸轮油封	Oil seal
5	36T6 - 003C1a1	膝控提升杠杆(左)	Knee lifter lever (left)
6	22T7 - 004B1b	松线凸轮	Tension releasing cam
7	22T7 - 004B1c	膝控提升杠杆(左)螺钉	Screw
8	22T7 - 004B2	铰链螺钉	Screw
9	22T7 - 004B3	膝控提升拉杆	Knee lifter rod
10	22T7 - 005	松线凸轮螺钉	Screw
11	36T6 - 004	膝控提升杠杆(右)螺钉	Screw
12	36T6 - 004	松线杆	Thread releasing pin
13	22T7 - 007C1	膝控提升杠杆(右)	Knee lifter lever (right)
14	22T7 - 007C2	膝控提升杆(右)弹簧	Coil spring
15	22T7 - 007C3	膝控提升连杆	Knee lifter connecting rod
16	22T7 - 008	弹簧销	Pin for spring
17	22T7 - 009	压紧杆轴套	Bushing for presser bar
18	22T7 - 010	压紧杆	Presser bar
19	22T7 - 011D1	压紧杆导架	Presser bar guide bracket
20	36T6 - 007	压紧杆导架螺钉	Screw
21	22T7 - 012	压紧杆弹簧导柱	Presser spring guide
22	48T7 - 002	压紧杆弹簧	Presser spring
23	22T7 - 014E1	调压螺钉	Thumb screw
24	22T7 - 014E2	调压螺钉锁紧螺母	Lock nut
25	22T7 - 015	压脚螺钉	Screw
26	22T7 - 017F	压脚组件	Presser foot asm
27	48T7 - 003A	压脚组件	Presser foot asm
28	36T6 - 009	大线勾	Thread guide
	22T2 - 004	大线勾螺钉	Screw
	57T7 - 002	压脚护簧	Presser foot spring

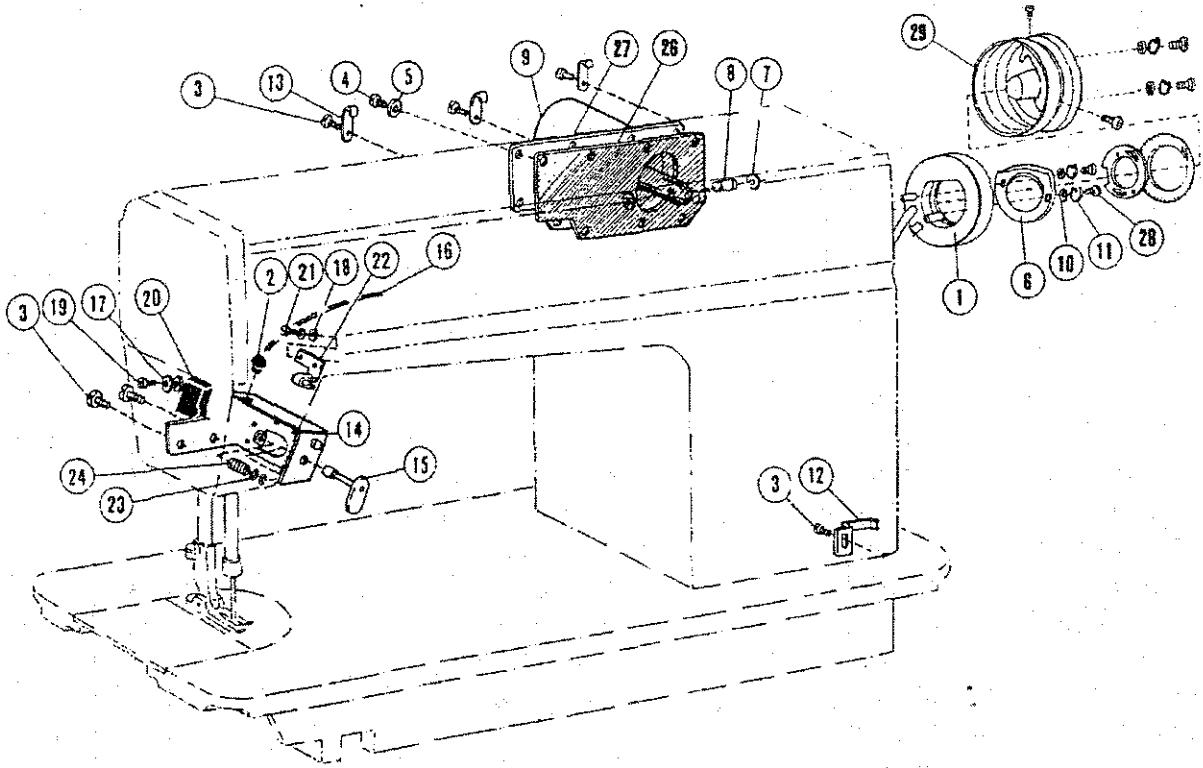

KNIFE ACTUATING MECHANISM

No.	Part No.	Description
-----	----------	-------------

1	36T8-009	切线电磁铁销
2	GB896-76	开口挡圈
3	36T7-001A1	挠性驱动板
4	36T7-001A2	驱动板螺钉
5	J0.0.16	驱动板螺母
6	36T7-001A3	软线支撑板
7	36T7-001A4	软线支撑板螺钉
8	36T7-001A5	软线连板
9	36T7-001A6	软线连板螺钉

21	36T7-002B3	刀片紧固螺钉

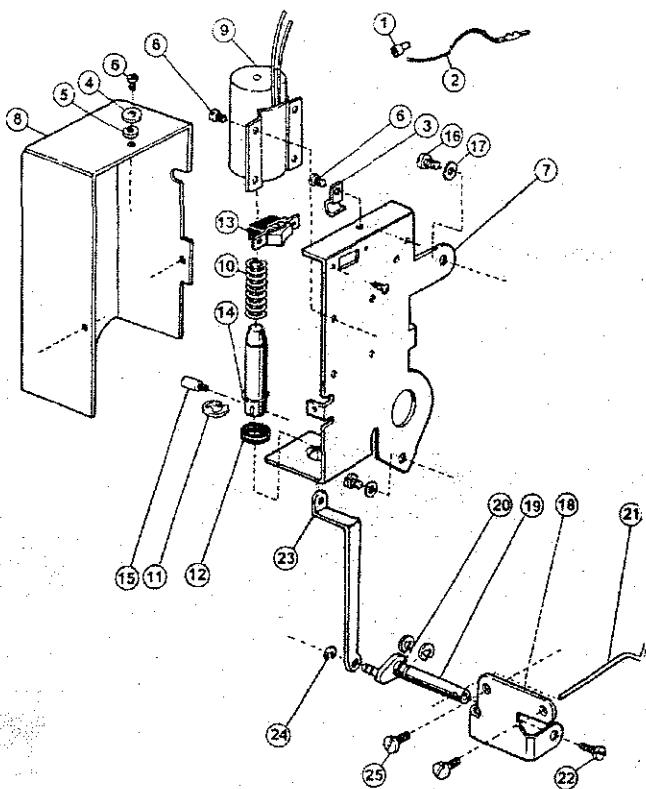

KNIFE ACTUATING MECHANISM

No.	Part No.	Description
20	36T7 -002B4	切刀驱动曲柄 Knife driving crank
21	61 -04 -01 / B6	切刀驱动曲柄螺钉 Screw
22	36T7 -002B5	刀轴连杆 Link
23	36T7 -002B6	刀轴连杆螺钉 Screw
24	36T7 -002B7	刀轴连杆螺母 Nut
25	36T7 -003C1	凸轮曲柄(1) Cam follower crank(1)
26	36T7 -003C2	凸轮曲柄(2) Cam follower crank(2)
27	36T7 -003C3	滚柱轴 Roller stud
28	36T7 -003C4	凸轮曲柄滚柱 Roller
29	36T7 -003C5	滚柱螺母 Nut
30	36T7 -004	切刀驱动轴 Knife driving shaft
	120T7 -002	切刀驱动轴 Knife driving shaft
31	36T7 -005	驱动轴弹簧 Coil spring
32	36T7 -006	扭簧端盖 Bushing
33	165720004	限位块 Stopper
34	165720001	限位板 Stopper plate
35	GB6172 -86 - M6	限位板螺母 Nut
36	165720002	限位板螺钉 Screw
37	36T7 -009E1	拦线板 Thead guide
	120T7 -003B1	拦线板 Thead guide
38	J0.0 .72	拦线板螺钉 Screw
39	36T7 -009E2	定刀片固定架 Bracket for fixed blade
40	36T7 -009E3	定刀片 Fixed knife
	120T7 -003B2	定刀片 Fixed knife
41	36T7 -009E4	定刀片紧固螺钉 Set screw
42	36T7 -009E5	定刀片调节螺钉 Adjusting screw
43	36T7 -009E6	定刀片调节螺母 Adjusting nut
44	36T8 -002	限位板固定螺钉 Screw
45	36T7 -010F	软线组件 Flexible wire asm
46	36T7 -011G	接地线组件 Earth wire asm
47		插头 Plug
48	36T7 -013	橡皮套 Rubber sleeve
49	36T7 -014	导线夹头 Wire clamp
50	GB848 -76	垫圈 Washer
51	GB54 -76	软线螺母 Nut
52	22T2 -019	螺钉 4. 37 × 40/8 Screw 4. 37 × 40/8
53	36T8 -002	切线电磁铁架固定螺钉 Screw
54	22T5 -010D4	螺钉 Screw
55	36T9 -001A2a2	凸型插针 Pin
56	36T7 -001A9	挠性驱动板扭簧 Coil spring
57	36T7 -001A10	驱动板紧圈 Collar for driving lever
58	36T5 -008E8	驱动板紧圈螺钉 Screw
59	36T7 -015H1	驱动轴紧圈 Collar for knife driving shaft
60	22T3 -002B1	驱动轴紧圈螺钉 Screw
61	36T7 -016	驱动轴扭簧 Coil spring
62	36T7 -017	插头护套 Guard for plug
63	165720003	缓冲垫 Rubber washer

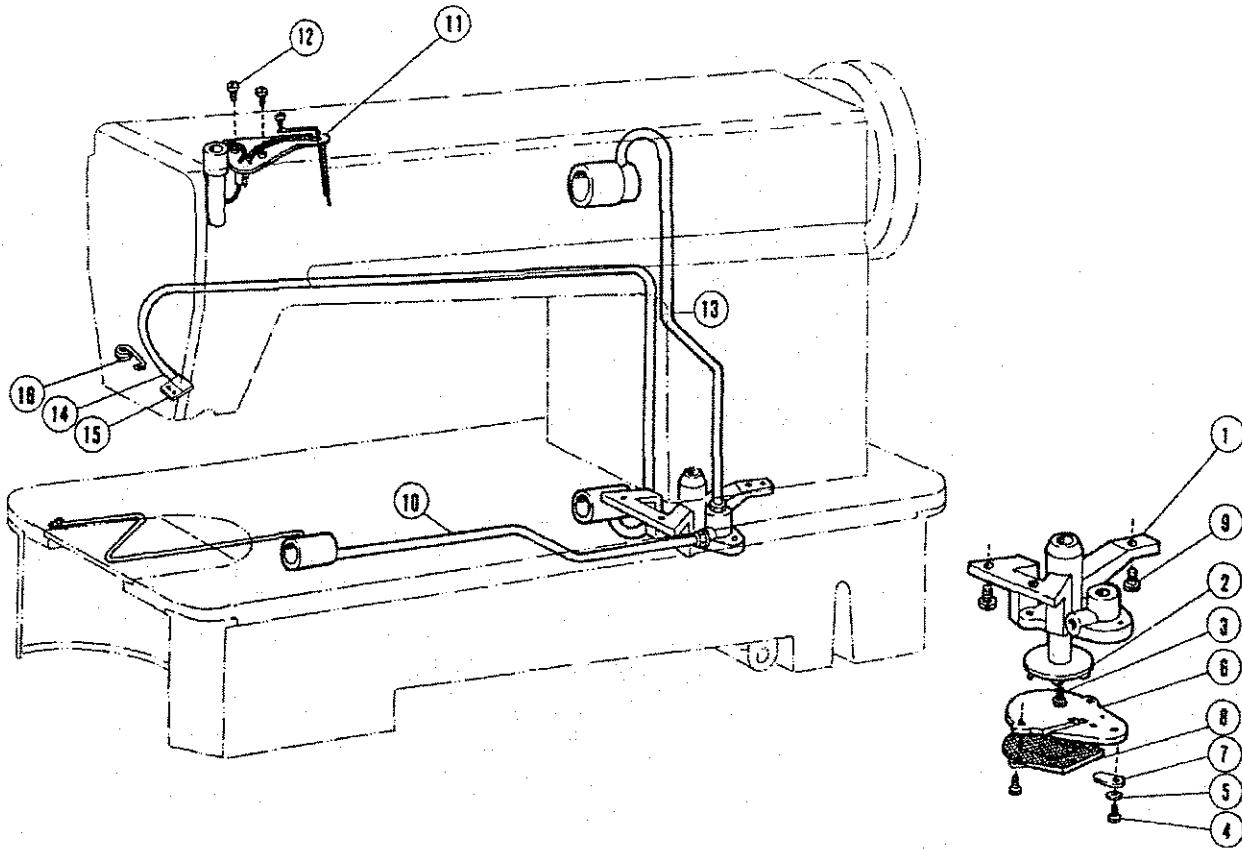

REVERSE SEWING MECHANISM

No.	Part No.	Description
1	001D3 -001A	检测器组件
2	36T7 -014	橡皮套
3	22T2 -019	螺钉
4	22T1 -006	后盖板螺钉
5	22T1 -007	后盖板螺钉垫片
6		检测器压板
7	GB896 -76	开口挡圈 4
8	36T8 -009	倒缝电磁铁销
9	165820002	倒缝电磁铁
10	GB97.1 -85	垫圈
11	GB859 -87	弹簧垫圈
12	36T8 -005	总线夹
13	36T8 -006	电线夹
14	36T8 -007C1	开关安装架
15	36T8 -007C2a	按钮组件
16	36T8 -007C3b	倒缝开关组件
17	GB859 -76	弹簧垫圈 2
18	GB848 -76	垫圈 2
19	GB818 -85	微动开关螺钉
20	36T8 -007C4	微动开关
21	GB66 -76	片簧螺钉
22	36T8 -007C5	片簧
23	GB896 -76	开口挡圈 3
24	36T8 -007C6	开口弹簧
26	36T8 -008E1	后盖板密封垫片
27	165820001	后盖板
28		螺钉
29	165320001	主动轮配件

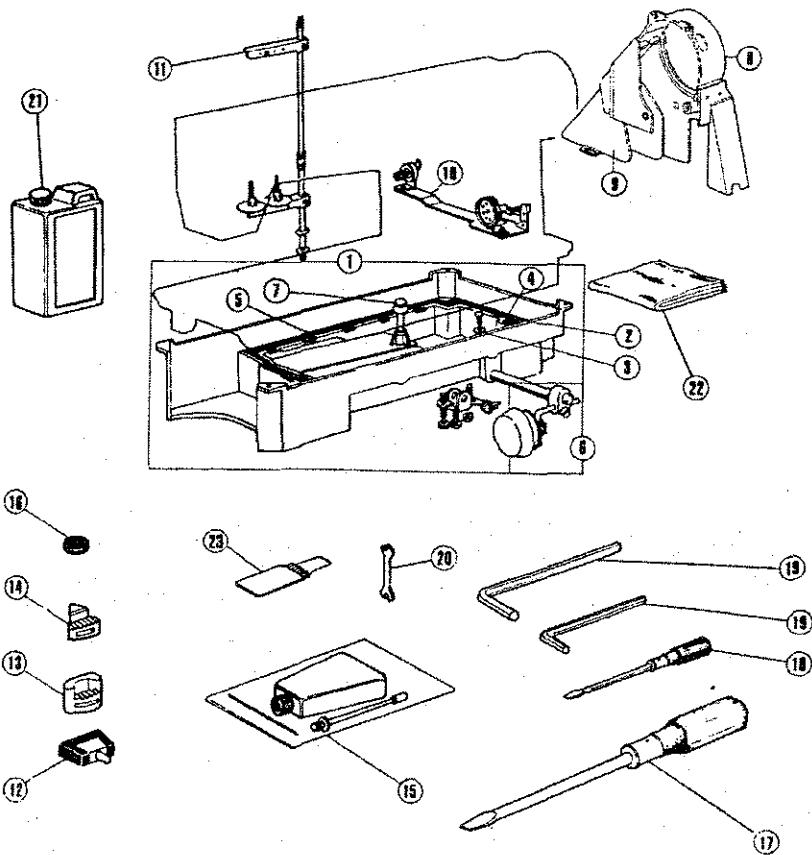

WIPER MECHANISM

No.	Part No.	Description
1	36T9 -001A1	电线接头
2	36T9 -001A2a	挡线电磁铁导线组件
3	36T9 -001A3	线夹
4	GB848 -76	螺钉垫圈
5	GB859 -76	弹簧垫圈
6	GB818 -76	磁铁盖螺钉
7	36T9 -001A4	电磁铁安装架
8	36T9 -001A5	挡线电磁铁盖
9	36T9 -001A6	挡线电磁铁
10	36T9 -001A7	螺旋弹簧
11	GB896 -76	挡圈
12	36T9 -001A8	橡皮圈
13	36T9 -001A9	挡线开关
14	36T9 -001A10	垫圈
15	36T9 -002	衔铁螺钉
16	22T5 -001A4	安装架螺钉
17	36T9 -003	安装架螺钉垫圈
18	36T9 -004B1	挡线轴安装架
19	36T9 -004B2a	挡线摆动轴组件
20	G896 -76	挡圈
21	36T9 -004B3	挡线勾
22	22T6 -001A4	紧固螺钉
23	36T9 -004B4	挡线连杆
24	GB896 -76	挡圈
25	36T9 -005	挡线轴安装架螺钉

OIL PUMP MECHANISM

No.	Part No.	Description
1	22T8-001	油泵体
2	22T8-002	油泵叶轮
3	22T8-003	油泵叶轮螺钉
4	22T8-004	油泵调节板螺钉
5	22T8-005	油泵调节板螺钉弹簧垫圈
6	22T8-006	油泵体盖板
7	22T8-007	油量调节板
8	22T8-008A	油泵滤网组件
9	22T8-009	油泵体螺钉
10	36T10-001A	下轴油管组件
11	22T8-011C	油线固定板大组件
12	22T8-012	油线固定板螺钉
13	22T8-013D	上轴油管组件
14	22T8-014	回油管
15	22T8-015	回油管滤油毡
16	36T10-002	回油管夹

OIL RESERVOIR & ACCESSORIES

No.	Part No.	Description
1	36T11 -001A	油盘组件
2	22T9 -001A2	放油螺钉
3	22T9 -001A3	放油螺钉垫圈
14	22T9 -001A4	油盘垫(小)
5	22T9 -001A5	油盘垫(大)
6	22T9 -003B	膝控碰块组件
7	22T9 -003B1	膝控提升顶杆
8	124T9 -003B	皮带罩组件
9	124T9 -004C	小皮带罩组件
10	6F0	绕线器组件
11	GXJ -2	线架组件
12	22T9 -007F	机壳铰链组件
13	22T9 -009	机头防震垫块(大)
14	22T9 -010	机头防震垫块(小)
15	22T9 -011	小油壶
16	22T9 -012	碰块
17	22T9 -013	螺钉起子(长)
18	22T9 -015	螺钉起子(短)
19	36T11 -006	内六角扳手 M4 M6
20	22T9 -016	双头扳手
21	22T9 -017	油箱
22	22T9 -018	机罩
23	22T9 -024	机针袋
